Title of Project

Company

Company logo

SYNOPSIS

Short summary of what the project does, how the project was developed and why the project is important to the company

CONCEIVE

Understand user requirements

Provides initial concept and key features

DESIGN

Choice of hardware and/or software

Design solution

IMPLEMENT

Build prototype and integrate

Testing/troubleshooting, Demo and prepare SOP

OPERATE

Operate prototype and deploy

One or more suitable images of project

Name of students
Course and Class
SP Liaison officer's name
Company Liaison officer name

To list down key points for each of stages of Conceive, Design, Implement and Operate.

CONCEIVE

What are the users' needs

e.g. improve efficiency and effectiveness of the production flow

What features will help meet these needs to achieve the functional goals of the project?

e.g. 24/Proposed features:

- Real-time tracking
- Visual display of location
- 24/7 remote access
- Process monitoring

One or more suitable images of CONCEIVE stage e.g. situation before project Implementation, meeting with users, environment before project was deployed, etc.

To include on this slide, more details on the Conceive stage.

The example used here to illustrate the CDIO stages is that of a remote monitoring system that includes both hardware and software.
This may not be applicable to all projects.

DESIGN

Choice of hardware and/or software, including standards

e.g.IEEE 802.15.4 standard, active RFID, wireless router, Windows=based computer, workstation, server, Visual Basic, web browser, SQL server, etc.

Systems Integration (How does the abc

e.g. RFID tag on device sends signal
wireless router picks up signal
computer receives data
Programme processes data received
Location displayed on computer

One or more suitable images for DESIGN stage

To include on this slide, more details on the Design stage.

The example used here to illustrate the CDIO stages is that of a remote monitoring system that includes both hardware and software.
This may not be applicable to all projects.

IMPLEMENT

List of activities carried out in implement stage

e.g.
Sourcing of hardware,
Assembly and testing,
Troubleshooting and verifying
Demo and presentation of prototype
Preparation of operating procedures,
troubleshooting guide, instruction manual, etc.

One or more suitable images of
IMPLEMENT stage

To include on this slide, more details on the IMPLEMENT stage.

The example used here to illustrate the CDIO stages is that of a remote monitoring system that includes both hardware and software.
This may not be applicable to all projects.

OPERATE

List of activities carried out in operate stage

e.g.

Use of project and actual deployment on the plant flc

Training for staff on using the project

Benefits

How has the project benefit the company?

e.g.

Less delay in locating jobs

24/7 live tracking

Expedite delivery target

One or more suitable
images of OPERATE stage

To include on this slide, more details on the OPERATE stage.

The example used here to illustrate the CDIO stages is that of a remote monitoring system that includes both hardware and software.
This may not be applicable to all projects.
